

How to Provide Socket Cutout Measurements

Overall Glass Size

Measure and confirm the **total width** and **total height** of your panel. Always measure in millimetres.

Socket Sizes

Single socket: 75mm x 75mm

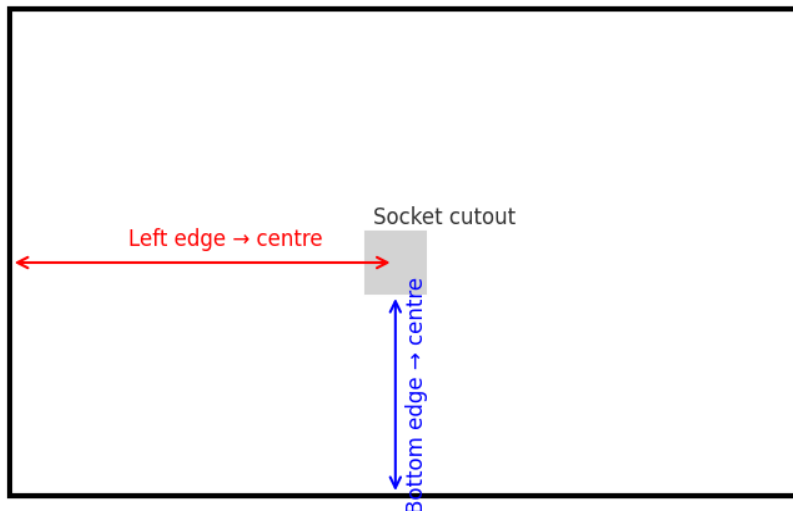

Double socket: 135mm x 75mm

If unsure, loosen the faceplate and measure the box behind.

Measuring Socket Positions

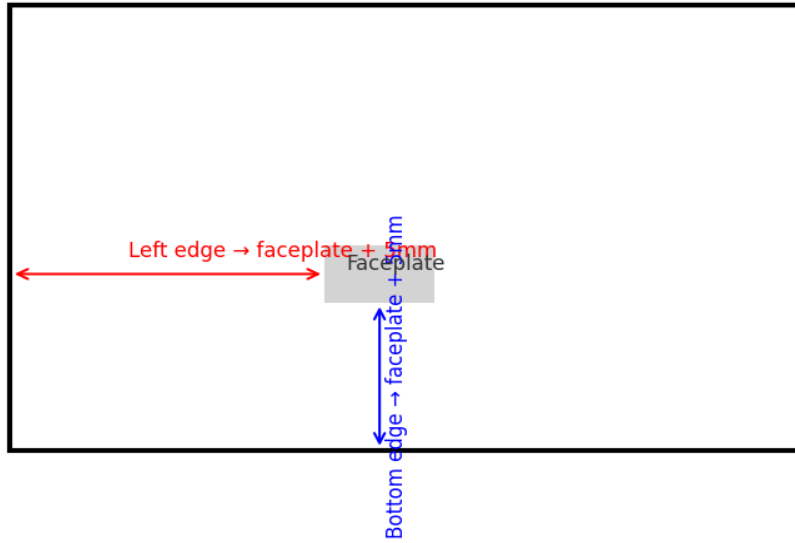

Option A (preferred):

- Measure from the **left edge** to the **centre** of the socket box
- Measure from the **bottom edge** to the **centre** of the socket box

Option B (alternative):

- Measure from the **left edge** to the **outside of the faceplate**, then **add 5mm**
- Measure from the **bottom edge** to the **bottom of the faceplate**, then **add 5mm**

Fitting Tip

Loosen the socket faceplate so the glass can slide neatly behind it.
